

MUNICIPAL ENERGY EFFICIENCY REBATE PROGRAM

Additions - October 2018

Great Savings on:

Solar Panels

Using solar panels to generate electricity can reduce your bills, minimize the impact of increasing energy costs, are low maintenance, and produce zero emissions.

Criteria:

- For residential service, an interconnection approval from the Wire Service Provider (WSP) signed on or after April 1, 2018
- For residential service, the solar photovoltaic (PV) system must be grid connected in accordance with Alberta's Micro-Generation Regulation

(AR27/2008).

- System must not be eligible for the Alberta Municipal Solar Program (AMSP) or the Alberta Indigenous Solar Program.
- Combined incentives from government programs must not exceed 100% of eligible system cost.
- Must own the property or have long-term rights to the property
- For residential service, system is designed and installed by a qualified installer (not self-installed) and system components meet the Canadian Standards Association (CSA) requirements for electrical safety or equivalent certification to applicable Canadian standards.
- For off-grid services (eg. gates, dog houses) the rebate will be \$0.75 per watt.

REBATE = \$0.75/WATT (UP TO \$10,000)

Only one application per landowner within the County as a whole
Further applications may be considered in future program initiatives.

Great Savings on:

Low flow Toilets

Toilets are by far the main source of water use in the home, accounting for nearly 30 percent of an average home's indoor water consumption. Older, inefficient toilets use as much as 6 gallons (22.7 liters) per flush also happen to be a major source of wasted water in many homes. Recent advancements have allowed toilets to use 1.28 gallons (4.8 liters) per flush or less, while still providing equal or superior performance.

REBATE = UP TO \$75 OFF PURCHASE

MUNICIPAL ENERGY EFFICIENCY REBATE PROGRAM

Additions - October 2018

Great Savings on:

High Efficiency Residential Furnaces and Boilers

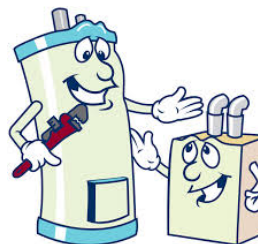

Energy efficient heating systems use less energy and are therefore less harmful for the environment. The more efficient the furnace or boiler, the more heat remains in the home. Annual fuel utilization efficiency (AFUE) is the ratio of annual heat output of the furnace or boiler compared to the total annual fossil fuel energy consumed by a furnace or boiler.

REBATE = \$1,000

For furnaces with Annual Fuel Utilization Efficiency Rating (AFUE) of 97 or greater and boilers with an AFUE of 95 or greater.

Great Savings on:

Standing Hot Water Tanks

Water heating represents 15 to 25 per cent of your household energy bill and may become a larger portion if you upgrade the energy efficiency of your home and its space heating and cooling systems without upgrading your water heating system.

**REBATE = UP TO \$350 OFF PURCHASE
(HIGH EFFICIENCY HOT WATER TANK WITH AN ENERGY STAR
RATING OF 0.72 OR BETTER)**
