

BRAZEAU COUNTY

Major Industry Profile

ENVIRONMENTAL

The Town of Drayton Valley and Brazeau County are home to a number of Environmental Companies. One of the most important aspects of the environmental service business is that there is a large infrastructure of equipment in the area. Examples of this equipment would include vacuum trucks, tanks, pumps etc.

Due to the size of the oil and gas industry in the area, the majority of the companies who call our area home are dealing with oil. Often these companies are making ground-breaking strides in the Environmental industry in the areas of waste management and environmental cleanup and reclamation.

Amongst these are the NewAlta Corporation Oil Separation Station and labs. And the Pembina Area Landfill – the only Class 1A Hazardous Waste Landfill sites in Alberta located 11 km northwest of Cynthia.

We are also proud to be the home of the Pembina Institute for Appropriate Development, commonly known as the Pembina Institute, an organization that is recognized nationally and internationally for its participation at the Kyoto Conference on Greenhouse Gas Emissions. The objectives of the Pembina Institute are to recognize that escalating social economic and environmental problems are inextricable linked and that effective solutions will come only by responding to the connections between these issues.
